Summary

Industrial Engineer and Data Analyst with professional experience supporting recurring reporting operations, validating high-volume consumer sales data, performing data quality checks and managing scheduled client deliverables in an international corporate environment. Experienced with advanced Excel and Python for data analysis and process automation, with foundational knowledge of SQL and developing proficiency in Power BI. Strong attention to detail, analytical problem-solving, documentation, process improvement and client-facing communication.

Experience

Capgemini, Client Service Analyst – Bogotá D.C. Dec 2024 – May 2026

- Executed recurring weekly and monthly reporting processes for a major U.S. consumer goods client, refreshing and validating sales reports through the client's internal data platform.
- Reviewed high-volume sales information covering up to 120 weeks of historical data across geography, time period and product dimensions.
- Performed quality checks on refreshed reports to verify accuracy, consistency and compliance with established reporting procedures before delivery.
- Conducted New Item Reviews every four weeks, manually validating newly introduced products against predefined business criteria in the client's internal product-data platform.
- Worked directly with client stakeholders to clarify reporting requirements and address requests, participating in daily meetings with vertical leads and weekly meetings with the client team.
- Managed reporting activities against weekly, monthly and four-week deadlines.
- Prepared handover documentation and delivered one-on-one knowledge-transfer sessions to ensure continuity of responsibilities.

ACO | Grupo Nutresa, Logistics Development Intern – Bogotá D.C. Dec 2023 – June 2024

- Developed and maintained advanced Excel tools for logistics KPI tracking, operational monitoring and reporting.
- Used Python in Jupyter Notebooks to process and analyze datasets that exceeded the practical performance of Excel, improving the efficiency of data analysis workflows.
- Supported data preparation for a Warehouse Management System implementation by measuring, validating and categorizing operational information for more than 100 products.
- Automated repetitive Excel tasks using formulas and macros, reducing manual calculations and helping colleagues complete recurring activities more efficiently.
- Improved inventory documentation and logistics procedures, contributing to more structured and reliable operational information.
- Trained transportation personnel in the use of a Transportation Management System.

Education

BSc **Universidad Distrital Francisco José de Caldas**, BSc in Industrial Engineering Mar 2026

Skills

Technical Skills: Advanced Excel (PivotTables, Power Query, XLOOKUP, INDEX/MATCH, advanced formulas, macros, reporting tools); Python (Pandas, NumPy, Jupyter Notebooks, data processing and basic visualization); SQL (foundational: queries, filtering, joins, aggregations, relational database concepts); Power BI (developing proficiency: dashboard creation and data visualization fundamentals)

Data & Operations: Data Validation, Quality Checks, Reporting Operations, KPI Monitoring, Large Dataset Analysis, Recurring Operational Processes, Process Improvement, Business Requirements, Documentation, Knowledge Transfer, Client-Facing Communication

Languages: Spanish (Native), English (C1), French (A2)
